

SCAN QR ATTENDANCE IN CLOUDCME® **for Grand Rounds, Case Conference, and/or Live activities**

NOTE: You MUST have a profile set up in CloudCME prior to utilizing the QR feature

The **Scan QR Attendance** feature can only be utilized if the CloudCME® app is downloaded on your mobile phone.

It is designed to:

- Allow participants to record attendance quickly using a QR code displayed at the event location.
- Provide real-time attendance tracking without requiring sign-in sheets or manual entry.
- Ensure the attendance data is securely linked to the attendee's CloudCME® transcript record.

This feature is used by both participants and administrators who configure QR attendance tracking as part of their live activity setup.

Attendance may be texted if the app is not downloaded.
